Kirami Mixing paddle is used for mixing the water at the heating stage, to even out the layered temperature. Measuring the true temperature of the water is often challenging during the heating stage; to solve this problem, we developed a mixing paddle suitable for all hot tubs and pools. The product is used for mixing the water during heating, so the layered temperature can be equalised before measuring. The mixing paddle features a plastic knob and blade and an anodised aluminium arm. The Kirami mixing paddle is made in Finland.
