Cartridge filter for filtering pool water. It is important to take care of water hygiene in pools. And the physical part can be taken care with a cartidge filter. This filter is based on using a fiber based cartidge for filtering the pool water. It works by the pump moving the water through the cartidge walls from outside to inside. It can be used in small swimming pools and hot tubs. On top of physical filtering it is important to use chemicals in the water to keep bakteria and viruses under control.

A convenient water filter with a lamella filter cartridge that keeps your bathwater clean. You can hang the filter on the edge of the tub with a hanger designed for Kirami hot tubs. The product is easy to set up and use. This is how the filter works: the water passes first through a coarse filter, after which it enters into the submerged filter cartridge. A pump on the bottom of the device pumps the filtered water back into the tub. The filter cycles 2,000 litres of water per hour. During use, the filter also mixes the water in the tub.

Bacteria and microbes must be removed separately with chemicals.
