

Kirami Cartridge filter CF23

Cartridge filter for filtering pool water. It is important to take care of water hygiene in pools. And the physical part can be taken care with a cartridge filter. This filter is based on using a fiber based cartridge for filtering the pool water. It works by the pump moving the water through the cartridge walls from outside to inside. It can be used in small swimming pools and hot tubs. On top of physical filtering it is important to use chemicals in the water to keep bacteria and viruses under control.

CF23 is an external cartridge filter system suited for Kirami hot tubs and filters bathing water efficiently. It is built as one piece where the integrated pump is below and the cartridge tank and turn connector are on the top. The suction side has a coarse prefilter for bigger carbage that protects the pump. The filtration area is 2,3m² and the cartridge can be washed and rinsed by running water. The cartridge can also be replaced with a new one when needed.

The system needs to be connected to the hot tub with optional wall through/hose kit, that is sold separately. The system has hose connectors for 38mm inside diameter hoses. The device must always be connected to a RCD protected power socket.
