The Kirami FinVision® -terrace for the Misty series is a ready-made module that is easy to connect with other Misty buildings. The terrace can be installed between the sauna, changing room or lounge. Alternatively, the terrace can also be attached as an extension to a sauna or changing room, for example, so that the covered terrace can be used as a comfortable recreation area. A third option is to purchase the terrace as a separate module, for example as a sheltered sun terrace or summer kitchen. Terrace modules are available in different sizes and can also be interconnected if you want a larger terrace space. Imagination, your taste in interior design and your own yard are the only limits as to how this additional module, like other parts of the sauna, can be connected to create the perfect ensemble for you.

The terrace consists of a back wall, a roof, a floor and two support beams on each side of the front. The outer panelling of the terrace's back wall is made of the same spruce panel (STS profile) as in the Misty sauna. The inner sides of the back wall and the roof are made of heat-treated 3D wooden slats, which gives the buildings a nice, light look. Two beams at the front of the terrace allow the terrace modules to be easily connected in different ways to the Misty buildings. The terrace floor is made of heat-treated pine, which keeps the terrace structure looking uniform and light. The roof of the terrace is easy to connect with the other Misty modules, thanks to its uniform clicklock roofing material and construction.

This larger terrace serves as a unit between the sauna, changing room or lounge, connecting the modules. Alternatively, the terrace can also be attached as an extension of these buildings. It is possible to install a small outdoor shower for summer use on the terrace.

The terrace can also be used as a separate module, such as a sheltered sun terrace or a barbecue shelter. The larger sun terrace has space for two sun loungers or a small summer kitchen, for example. A sofa, sun loungers, a dining group or a kitchen will decorate the terrace beautifully and the sunniest moments of relaxation or dining can be enjoyed in a more sheltered place. The terrace is lifted into place on a prepared flat surface that can withstand the weight of the terrace. The base can be evened with gravel or, if you want a firmer base, it can be cast in concrete.

The building does not have to be connected to other buildings if you do not want this.

You can also combine a large M-size terrace with an S-size or another M-size terrace if you want a larger sun terrace. Nothing prevents you from connecting the terrace to a sauna building, for example, at a later date.

## Connecting the terrace to the sauna/changing room/lounge

The terrace is attached to the sauna or changing room and connected at the bottom at the transport supports. The roof is connected with a U-profile sheet. The terrace can be installed attached to the sauna and changing room or it can end as an open terrace.

## Lighting

There are LED strip lights between the back wall and the roof of the terrace. This indirect lighting creates a pleasant atmosphere and highlights the shape of the 3D panels. There are also two LED lights embedded in the ceiling to provide additional light to the terrace when required. A 2-button light switch is mounted on the back wall, which allows you to control both lights separately.
