An outdoor building that is suitable for many different uses

The Kirami FinVision® -lounge M Misty is a complete, separate module with finished walls. It fits seamlessly with the other Kirami FinVision® Misty modules or can be used as a stand-alone building. There is enough space for different interior design options depending on the intended use of the building. For example, the lounge can be used as a relaxation area or remote working space. The lounge can be furnished with a Kirami FinVision® -sofa set and rug or other furniture of your choice.

High-quality surface materials

The surface materials of Lounge M are the same as in other Misty modules: The outer shell of the Lounge is a sleek, heat-treated softwood (* spruce) panel. The stylish and deep black surface-treated thermal wood is long-lasting, and the color protects the wood from dirt and UV radiation. This easy-care exterior cladding completes the lounge's modern and stylish look. The interior surfaces of the lounge are heat-treated hardwood (* aspen). The floor, walls and ceiling of the lounge are insulated, making the space comfortable to use all year round.

All the glass surfaces in the lounge and other modules are the same shade and let in plenty of light. In Lounge M, there is one large window from which it is wonderful to admire the outdoor scenery. The double-glazed window made from grey, tempered, selective glass also improves the lounges's energy efficiency, and the argon gas between the panes acts as an insulator. The panoramic window has a dark tint, which gives a wonderful balance

and gentle feeling to the beautiful view.

A smoky grey lockable glass door with a black wooden frame creates a cosy atmosphere and a sense of space in the lounge. The high-quality thermal glass door is of solid construction, and stays shut well. The number of doors of lounge M depends on the customer's choice and whether lounge M is installed next to the sauna or as a separate module.

Lounge M comes with lighting and sockets pre-installed. A strip light on the rear wall provides soft light for a more relaxed feel, while two Led spots in the ceiling illuminate the whole room more brightly. The light switch is a two-piece switch, so the strip and spots can be switched on at the same time or separately from their respective switches. There are plenty of sockets for many devices in this set-up. There are two socket boxes in total, each with two plug sockets. The boxes are placed on each side wall. In this "plug and play" lounge, all electrical connections have been made, meaning they are ready for use immediately after installation. The plug can be found outside the building on the back wall.

Let the Kirami FinVision® -lounge M be your canvas and paint your ideal garden space with its versatile options. The boundless potential is only tethered by the reins of your imagination!

**We reserve the right to material changes, if the raw material prices and/or availability of the products change significantly during the validity period. We try to keep the quality of the material at least the same as the original, despite the change of material.*

The door is on the left side of the lounge and it opens up left-handed

Optionally, a finished Kirami FinVision® -terrace module can be installed between the sauna and the lounge - or several of them. It is also possible to set up the lounge as a completely separate building. If the lounge is to be used as an independent building (not connected to the sauna), then the building only has one outer door.

All doors in the modules are of the same design and size. The lounge door has a black Abloy handle and a key-operated lock.

Lounge as a separate module or combined with a terrace/ pergola

The lounge can be placed as a separate module on a level surface, such as a terrace/pergola, a stone floor or a gravel bed. The building does not have to be connected to other buildings if you do not wish to do so.

Between the lounge and the sauna, you can add a Kirami FinVision® -terrace/pergola of size S or M - or several terrace/pergola modules if you wish. All module variants have the same roof so that they can be easily connected to each other. The modules are assembled in such a way that they connect directly to each other and are connected to each other at the transport supports. The roof is connected at the intermediate walls with a wider U-profile sheet.
